## OFFICE HOURS

Monday – Friday 8am–7pm

### Dr Geoff Martin

MBBS Dip.(Obst.)RCOG FRACGP  
Monday, Wednesday & Friday  
Thursday mornings  
Tuesday – Nursing Home Visits

### Dr Andrew Gilmore

MBBS Dip.RACOG FRACGP  
Monday, Wednesday & Thursday mornings  
Tuesday afternoons

### Dr Sorayya Martin

MBBS Dip REpMed FAFPM FRACGP  
Monday  
Friday afternoon (monthly)  
Wednesday and Thursday all day  
Tuesday and Wednesday  
– Nursing Home Visits

### Dr Patrick Elton

MBBS FRACGP  
Monday, Tuesday, Thursday & Friday

### Dr Anne Cawley

MBBS FRACGP  
Tuesday all day  
Wednesday & Friday mornings  
Thursday alternate mornings

### Dr Rebecca Jeanes

MBBS  
Monday & Tuesday mornings  
Thursday afternoon, Thursday alternate mornings

### Dr Muzaffar Karimov

PHD FRACGP  
Monday afternoon  
Wednesday & Friday all day

## OFFICE STAFF

**Practice Manager:** Jenny Lambert  
**Reception:** Kathryn, Christine & Ashleigh  
**Practice Nurses:** Jan McCrea & Mary Guerin

## CONSULTATIONS BY APPOINTMENT

For after-hours emergencies – at night, weekends or public holidays – call 8431 2799 to contact the duty doctor.

A reminder that our telephone (8431 2799) is answered 24 hours a day. The call will be directed to our on call duty doctor, one of our four partners, who will be able to give advice and organise appropriate treatment if necessary.

## Taking back control of chronic pain

If you suffer from chronic pain, you may think no one understands how you feel. But, did you know one in five Australians are suffering from it too, and even more in the over-65 age bracket?

Chronic pain is constant, ongoing pain that will occur for at least 50 percent of the time in a six-month period. While cancer and nervous system injuries can cause chronic pain, it can also have no diagnosable cause and affects children, adolescents, adults, and the elderly. Chronic pain does not discriminate.

### WHAT IS CHRONIC PAIN?

Think back to the last time you were healing from an injury, even if it were a bruise from hitting your hand or a scraped knee. You felt pain for a few days or weeks, but then it went away as the injury healed. Chronic pain is feeling pain but often for no reason, or long after a wound heals.

Your spinal cord and nerves become sensitive, and even with no damage, enhances messages to your brain to tell you to feel pain in certain areas. In essence, your nervous system is alerting you that you've injured a part of your body when you're actually completely okay.

What can often make chronic pain worse, too, is when it begins to enhance pain in areas of your body where there once were injuries that are now healed. You now feel both the old pain and new pain, exacerbating the situation.

While chronic pain often has no cause, there are scenarios where it does – such as from

cancer or neuropathic pain. When you are involved in an accident or sustain an injury resulting in nervous system damage, you can permanently damage your nerves. As a result, areas of your skin may tingle, feel numb or as if they're burning, or you may experience sharp, shooting pains.

### HOW DO YOU FIX CHRONIC PAIN?

Anyone who has ever had chronic pain wishes there was a cure, but unfortunately, there is only a way to manage it. Managing chronic pain involves a multimodal approach: non-opioid medication for short-term pain management, remain involved in social situations, as well as a mix of sleep, relaxation, physical activity, positive thinking, and care for your overall health. Helping your body to cope with chronic pain involves self-management and discipline.

### SEE A HEALTH PROFESSIONAL

When you see your GP about chronic pain, it's important to seek more than just pain relief medication. Their job is to help you manage your pain by learning about your personal situation, how you manage your pain currently, and what you find does and does not work for you. The more detailed you can be, the more your doctor can help.

Chronic pain can rule your life, but it doesn't have to. Make an appointment with your GP to work through a detailed pain management plan. The goal is to live your life to the fullest, controlling chronic pain and not letting it control you!

See inside for an easy fresh and healthy RECIPE. Give it a try!

# Healthy autumn eating tips

A change in season often means a change in diet and routine. You may feel more inclined to seek the warmth and comfort indoors once you notice it getting a little cooler outside.

Avoid falling into the trap of sabotaging the healthy habits you practised throughout the warmer months and follow these easy tips to eat for comfort and yet still maintain your health and fitness goals.

## BE CREATIVE

Vegetables are dense with nutrients and high in fibre, which makes them the ideal food category to fill up on. Get creative and replace a high-fat creamy based pasta dish with zucchini noodles and a creamy avocado sauce.

## PROTEIN-PACK MEALS

Aim to include a serve of protein such as eggs, legumes, lean meat, tofu, or nuts/seeds into each meal. Protein helps to control blood sugar levels and appetite.

## MAKE FIBRE A PRIORITY

Start the day with a high fibre breakfast such as whole oat porridge with LSA and fresh fruit. Or if making a Bolognese sauce replace half the meat with legumes for a fibre boost. Fibre will help you keep those portion sizes in check.

## CHOOSE WARM INGREDIENTS

Create a warm and comforting feeling by flavouring dishes with foods known for their warming properties such as ginger, chilli and cayenne pepper.

## WATCH THE SALT

Try buying products with reduced salt and when making food from scratch use salt substitutes such as miso and tamari soy sauce.

## USE HEALTHY FATS

Fat is necessary to absorb vegetable nutrients so try adding coconut milk and avocado to soups.

## NEW COOKING STYLES

Cut down on oil used to stir-fry or grill and try poaching, steaming and slow cooking methods instead.

## SERVE RAW

While you may prefer the comfort of a cooked meal, eating raw foods helps your digestion. For example, try serving a fresh tomato salsa on top of a stew.

## BULK COOKING

Make a large batch of soup or casserole and create meal-sized portions to pop into the freezer. You'll have hot ready-made meals at your fingertips.

## SERVE SEASONAL

Autumn offers plenty of extremely versatile root vegetables as well as zucchini, cabbage, mushrooms, pears and persimmons. Eating in line with the season means your food will be full of nutrient-rich goodness.

## BUDDHA BOWL

### Ingredients

Zucchini, spiralsed  
Edamame beans, steamed  
Tofu, chopped  
Tomatoes, chopped  
Radish, sliced  
Avocado, sliced  
Can of chickpeas, drained  
Sprouts of your choice (optional)  
1 tsp cumin  
1 tsp paprika  
¼ tsp cayenne  
Coconut oil

Heat oil in a pan. Add cumin, paprika and cayenne powders. Heat for one minute. Add chickpeas, stir until coated and heat for another minute.

Place all ingredients into a bowl and serve with dressing.

### Dressing

½ C mild vegetable oil  
½ C rice vinegar  
3 carrots, roughly chopped  
3 Tbl fresh ginger, peeled and chopped  
1 Tbl maple syrup  
(or other sweetener eg. honey)  
2 tsp sesame oil  
Salt to taste

Blend everything together and adjust sweetness or salt to taste.

## DID YOU KNOW?

- Laughing is good for the heart and can increase blood flow by 20%.
- Skin is the largest organ in the body and it defends against disease and infection.
- Always look on the bright side of life: being an optimist can help you live longer.
- Exercise will give you more energy, even when you're tired.
- Too much sitting and sleeping can increase your chances of an early death.
- A lack of exercise now causes as many deaths as smoking.
- Nearly 30% of the world's population is obese.
- Between 2000 and 2015, the average global life expectancy increased by five years.
- More than half your bones are located in your hands and feet.

# The truth about tonsils

The human body features many weird and wonderful organs, and while we understand what most of them do, the role of tonsils is not common knowledge. What are they and why do you have them?

When you hear the word 'tonsils' you usually associate it with the lumps of tissue that sit either side of your throat. However, along with the adenoids (found at back of your nose) and other tonsil tissue at the back of your mouth, they form what is known as Waldeyer's ring. All these tonsil components link together and work in conjunction with your lymph glands to form part of your immune system.

When you were born, your tonsils played a crucial role. Your lymph glands weren't entirely developed, and your tonsils were your body's first line of defence against germs. They would trap anything harmful that entered your mouth, and your body could then produce antibodies to kill those germs.

However, once your lymph glands developed and took over defending the frontline, your tonsils became redundant. As they can still trap particles of food and germs this can sometimes cause an infection which is commonly referred to as tonsillitis.

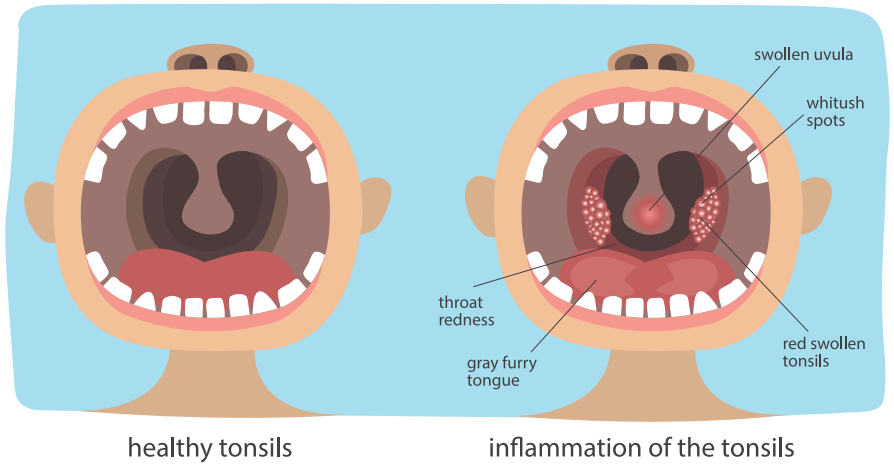

Tonsillitis is an infection caused by either a virus or bacteria. It can create a range of uncomfortable symptoms such as a sore throat, pain when swallowing, ear ache, swollen or tender lymph glands and coughing, for example. In most cases, symptoms improve on their own in around 7-10 days, but in a severe case which may cause

fever, stiff neck, or muscle weakness, you may need to see a doctor for treatment.

To diagnose tonsillitis, your doctor will examine your tonsils, looking for white spots, rashes, and enlarged lymph glands and ask you a few questions. It may be necessary to take a swab to confirm the cause of any infection.

Drinking lots of fluids and getting plenty of rest will generally help to clear up tonsillitis. Your doctor may also recommend pain relief medications and/or antibiotics if required. In ongoing, severe cases that cause secondary issues such as sleep apnoea or abscesses, a recommendation for surgery might be made.

If you suffer from a sore throat and fever for two or more days, or if you have extreme discomfort caused by tonsillitis, please see your GP to discuss your treatment options.

# One hundred trillion inhabitants

Did you know over one hundred trillion microorganisms are taking up residence in your gut? What are they doing there?

There is no denying that your body is quite complex, with a lot happening at any one time. But, one of the most challenging components is your gut. Your gastrointestinal tract houses over one hundred trillion microorganisms, all of which exist due to what you eat and what you do on a daily basis. Your lifestyle is unique to you, therefore so are your gut microorganisms.

These little creatures have a job to do, and it's quite an important one. They absorb all the nutrients from your food, digest them, then help your metabolism. What's more, all they ask for in return is a place to live – your gastrointestinal tract.

## WHAT PART DOES FOOD PLAY?

The food you eat plays a significant role in what microorganisms live in your gut – some good, some bad. However, there are two standout microorganisms you should try to get as much of as possible: probiotics and prebiotics.

Probiotics are yeasts and good bacteria which are found in fermented foods such as yoghurt and gherkins as well as tempeh, kimchi and miso. Prebiotics are found in whole grains and legumes, as well

as fibrous fruit and vegetables. Prebiotics feed the 'good' bacteria in your gut, helping to keep them alive.

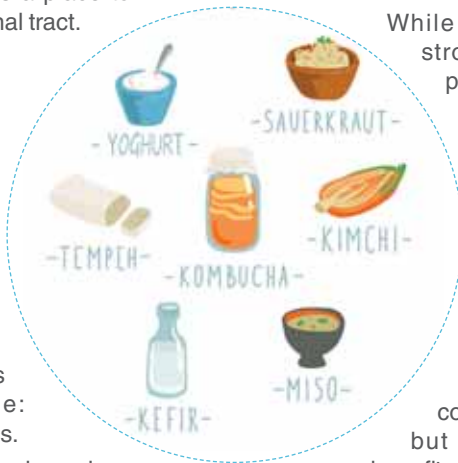

Both can naturally be found in foods and are available in supplement form, and many manufacturers are also now adding them to everyday food.

## PROBIOTICS AND THE FUTURE

There is still so much researchers don't understand about probiotics and the part they play. However, there is growing research to suggest that your gut health is linked to chronic disease. This same research is beginning to show a connection between particular bacteria types and illnesses such as diabetes, heart disease, and obesity.

While there is not a lot of strong evidence regarding probiotics and the benefit for digestive upsets, some people swear by them for constipation and diarrhoea. So if you do take a supplement for this reason and it appears to be helping, there's no reason to stop.

Gut health can seem complicated and confusing, but you can significantly benefit your body by ensuring you consume a nutritional and balanced diet. Include plenty of fruits, vegetables, whole grains, and legumes, and consult your GP if you are experiencing any digestive upset.

## SCRIPTS & REFERRALS

It is not the usual practise of our doctors to provide indefinite referrals. The reasons for this is the doctor must consider any changes in your current medical condition or medication and advise the specialists of this prior to any procedure. The specialist needs this information to ensure your safety. It is similar when a repeat prescription is provided, the doctor must spend time reviewing the medical records to ensure the prescription is appropriate to provide. Doctors are responsible for the scripts they issue so it is not simply a matter of pushing a button.

All Script requests need to be written by your usual GP. As your doctor may not consult every day you may not be able to collect your script for 2-3 days, please endeavour to request scripts a week before the medication is required. In the event your supply has run out in your usual doctor's absence you may need to make an appointment with another GP for this service.

### Charges for scripts are:

Private patients - \$10

Pensioner & Concession Card Holders - \$5

Scripts requested to be collected on the same day: \$15 for Private Patients and \$10 for Pensioner & Concession card holders

Referrals for ongoing specialist care can be requested without an appointment, this service incurs a charge from \$5-\$10.

## MISSED APPOINTMENTS

We understand that appointments can be overlooked from time to time, however if repeated appointments are missed without giving adequate notice, a non attendance fee will be charged.

## OUR COMMITMENT

Hazelwood Clinic is dedicated to providing the highest levels of care and service for every patient and our experienced and friendly staff who are an integral part of our practice are here to assist you at all times. Please do not hesitate to speak to them about any queries or problems you may have.

## AFTER HOURS CARE

A reminder that our telephone (8431 2799) is answered 24 hours a day. When the surgery is closed your call will be directed to our on call duty doctor who will be able to give advice and organise the appropriate treatment.

## HOW WELL DO YOU KNOW YOUR BODY?

### TRUE OR FALSE?

1. Carrots help you see in the dark.
2. Eating chocolate gives you spots.
3. Going out with wet hair increases your chances of catching a cold.
4. Cracking your knuckles too much will give you arthritis.
5. It takes seven years for a person to digest chewing gum.
6. Sugar makes children hyper.
7. Shaving makes hair grow faster.
8. Sections on your tongue taste bitter, sour, salty, sweet and umami (savoury).
9. Your fingernails grow at the same rate.

ANSWER: They are all false!
